

Sprint 1 Plan - SafeHouse Team: SafeHouse Keepers

Completion Date: 2 November 2021

Revision Number: 1

Revision Date: 6 October 2021

Goal: For sprint 1, we hope to complete the basic functionality of a to-do list. Users should be able to add and remove tasks at their own will. They should be able to click on checkboxes to indicate the completion of a task, or uncheck a box in case something isn't completed yet. Lastly, there should be a clean and simple UI.

Task listing, organized by user story:

3) User story 1: As someone who gets confused easily, I want a basic UI that is able to display my tasks so that I can examine everything I've entered into my checklist.

- Tasks
 - Implement a Menu Bar at the top of the screen to allow for navigational purposes + a more advanced layout
 - User inputted tasks should appear in a box alongside a check mark
 - Area to input a new task with an "add" button

(3) User story 2: As someone who has a lot of tasks to remember before leaving the house, I would like a way to add or remove tasks to my checklist so that I can keep track of the things I need to remember before leaving the house.

- Tasks
 - Display user-written tasks on the screen after submitting
 - Make sure the keyboard doesn't cover one's input
 - Interactable checkboxes which can be marked and unmarked
 - Tasks are deleted upon pressing the task

Team roles:

Nate Lee: Product Owner

Luc Milburn: Developer

Josue Zamudio: Developer

Joeny Vo: Developer

Clyde Li: Scrum Master

Initial task assignment:

Nate Lee: User story 1
Luc Milburn: User story 2
Josue Zamudio: User story 2
Clyde Li: User story 1
Joeny Vo: User story 1
