Sprint 4 Plan - SafeHouse
Team: SafeHouse Keepers
Completion Date: 30 November 2021
Revision Number: 3
Revision Date: 17 November 2021

Goal: For Sprint 4, Implement shared list functionality. With MVP finished the team can start to implement back log functionality.

Task Listing, Organized by User Story:

(3) User Story 1: As a developer, I want to be able to understand the project code through comments so that I can maintain and scale the application.

(3) User Story 2: As a developer, I want all the documentation to be organized in the repo so that I can reference them when questions arise regarding the application.

(3) User Story 3: As a developer, I want a clear README to guide me through what's in the repo so that I can properly build and use the application.

(3) User Story 4: As a customer, I want a powerpoint presentation that demonstrates and walks though the application at a high level so that I can validate whether or not it meets my expectations.

(3) User Story 5: As a developer, I want testing and prototype documentation so that the user can be assured that the project is functional and resistant to errors.

(3) User Story 6: As an end user, I want confirmation for changing my home location so that I don't accidentally relocate and lose my original location.

(3) User Story 7: As a developer, I want to prevent users from spamming the database so that our systems aren't overloaded, and additionally allow our app to continue running quickly.

Initial task Assignment:

Nate Lee:	User Story 1, Comment Code
	User Story 2, Document Code

Luc Milburn:	User Story 1, Comment Code
	User Story 2, Document Code
	User Story 4, Power Point
	User Story 6, Confirm Home Location
